

Web Version Champion Model SRW

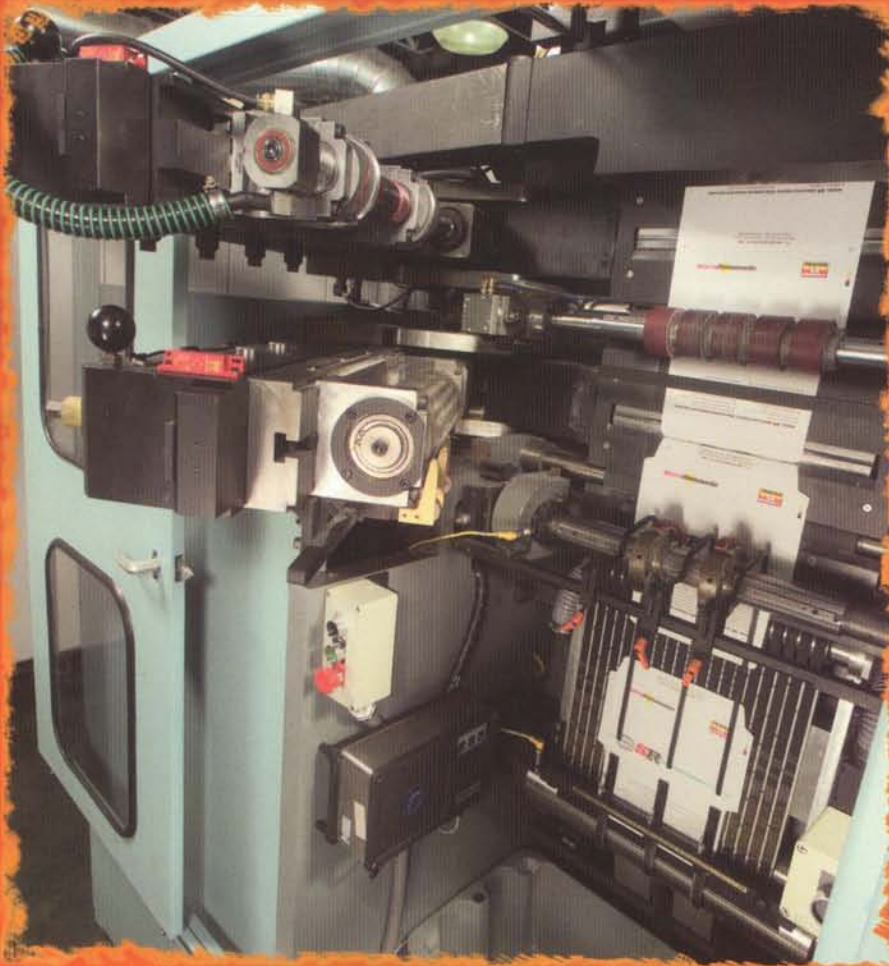

Designed to Produce a Wide Range of Value-Added Booklet-Style Envelopes
Incorporating Large Windows and Quality Printing

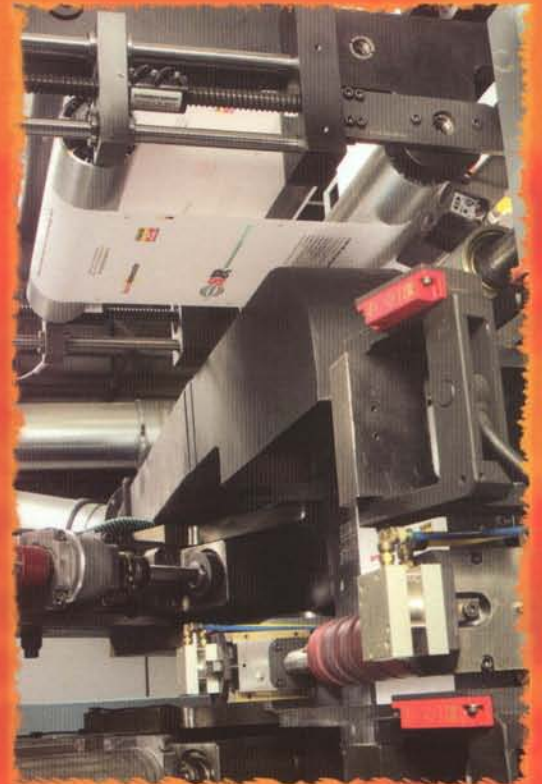

The Champion SRW offers quick and easy changes, ergonomic design, simple operator interface and a computer controlled operating system. In addition to ease of operation, the SRW is designed to interface with any combination of F.L. Smithe's superior web printing systems. The SRW delivers the consistent, high-speed production demanded in today's marketplace.

The SR Servo Stack Press, Model SSP, produces precise color to color registration. A simple touchscreen control allows the printers to be independently or simultaneously phased. Servomotors on each printer provide maximum control and consistency, as well as improved tension control of the web throughout the printing process. The optional sleeve and camera systems reduce change times and optimize productivity.

The SR's unique Swing-Out Profile and Cut-Off Knife Assemblies are another example of applied ergonomic design and technology. Both units have 360 degree circumferential adjustment control from any of the operator interface keypads. This mechanical-servo design provides for fast, easy and precise size changes and the ultimate in running adjustment flexibility. Following the cut-off, the envelope is then accurately controlled with a vacuum transfer table into the folding process.
