

# Servo Stack Press

## SSP - Servo Stack Press

The Champion Model SSP (Servo Stack Press) is a precise independently servo controlled printing press designed for the envelope industry. The SSP can be configured with up to six printers that can be arranged in a variety of outside and inside printing combinations. Each printer is servo driven and can be independently or simultaneously phased. Each printer uses a reverse angle chambered doctor blade system designed for high-speed operation. They insure the proper ink supply is maintained at running speeds of up to 1500 epm. The Champion Model SSP can be installed on the Champion Model SW folding machine, the Champion Model SR Web Combination folding machine, the Champion Model RA/WA with a servo driven web or the Champion Model ROS folding machine.
